

1. INTRODUCTION

The Enhanced Linked Virtual Information System (ELVIS) is a World Wide Web-based Common Operating Environment (COE)-compliant core component for the Global Command and Control System (GCCS) and Joint Maritime Command Information System (JMCIS) environments. ELVIS leverages the extensive capabilities and display mechanics of the Unified Build (UB) to provide a timely tactical display. The user requirements consist of a web browser compatible with the Netscape extensions to HyperText Markup Language (HTML) and connectivity to an ELVIS server using the standard Transmission Control Protocol/Internet Protocol (TCP/IP). ELVIS server software can operate on any GCCS/JMCIS workstation (Solaris or HP-UX) and does not require dedicated or additional hardware (so an ELVIS server can also be used as a GCCS/JMCIS workstation). Several system administration tools and files are available for configuring, tuning, and monitoring the performance of ELVIS. To balance system loading, ELVIS can be installed on multiple workstations and the system administrator can assign groups of client browsers to specific ELVIS servers.

IMPORTANT: A special “sysadmin” login is provided for access to additional functionality for managing and configuring ELVIS. The default password is “vinson”, which should be changed immediately once the installation is complete. If the sysadmin password is forgotten, a special utility (/h/LVIS/progs/LVISSA_ResetPasswd) has been provided to reset the password to “vinson” (see section on trouble shooting).

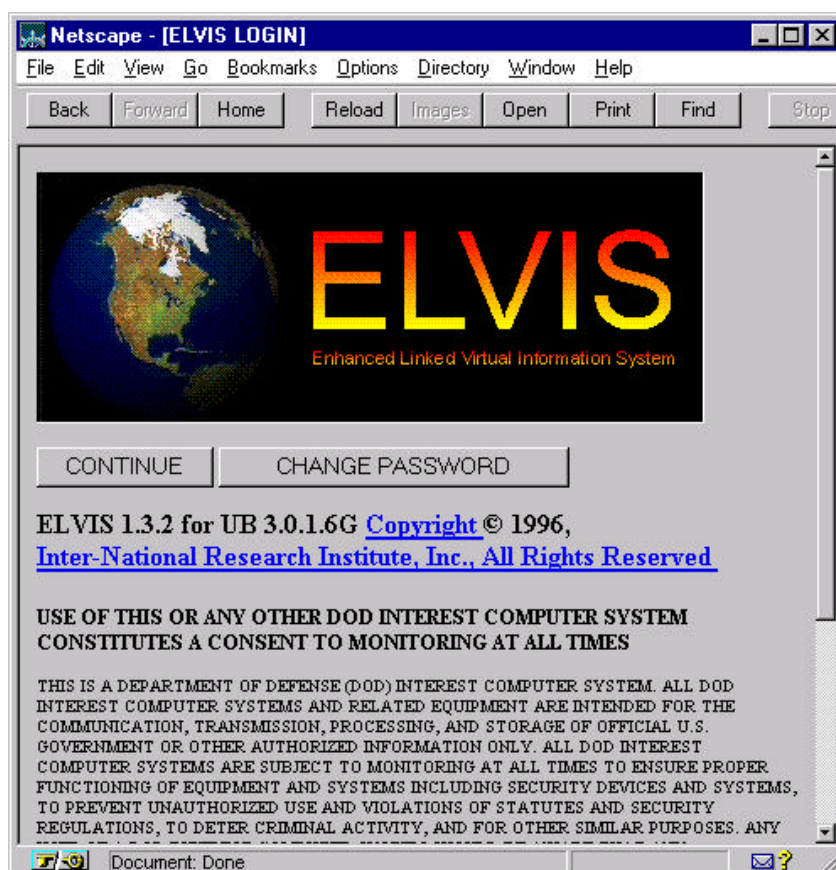

The login screen is shown below.

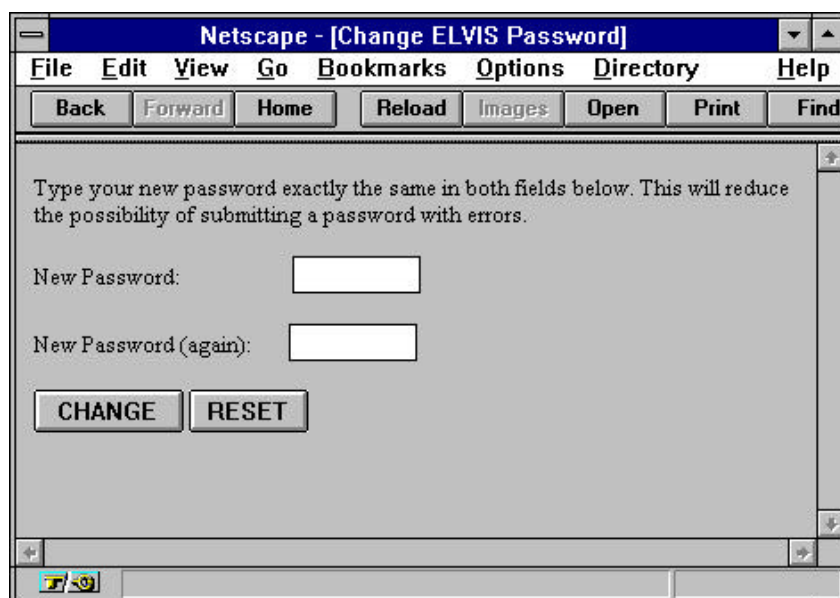

A screenshot of a Windows-style dialog box titled "Username and Password Required". The dialog has a blue title bar and a gray body. Inside, it says "Enter username for ELVIS at MAIN_COMM:9000:". Below this, there are two input fields: "User Name:" and "Password:". At the bottom right, there are two buttons: "Cancel" and "OK".

Following successful login, the following copyright/disclaimer screen is presented. An option is provided to change the password. Select CONTINUE to access the system administrator’s home page.

Enhanced Linked Virtual Information System (ELVIS) Version 1.3.2 System Administrator Guide

If the system administrator decides to change the password, then the following screen is presented. Upon selecting the CHANGE option, follow the instructions to re-login to ELVIS.

The system administrator's home page is shown below.
